## DETAILED ACTION

### *Drawings*

1. Figures 1-2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### *Claim Rejections - 35 USC § 112*

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 5-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The phrase "a threaded rod device of a nylon zipper" in claim 5 is unclear of what is the claimed invention: the threaded rod device or a nylon zipper. Clarification and/or correction are required.

Claim 5 also disclose the step of forming concave portions and convex portions on nylon gripper element. This functional limitation could be inherent characteristic of the apparatus. A single claim which claims both an apparatus and the method steps of using the apparatus is

indefinite under 35 U.S.C. 112, second paragraph. In *Ex parte Lyell*, 17 USPQ2d 1548 (Bd. Pat. App. & Inter. 1990).

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 5-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kato et al (6,302,676) in view of Popovitsch (3,729,800).

Kato et al disclose an apparatus for manufacturing slide fastener continuous element row, comprising a pair of parallel threaded rods (Fig. 5-6, 22), and pressing members having tips (23a, 25a) protrude in the recess in between the threads of the threaded rods.

However, Kato et al fails to disclose that the tips are located on the threaded rods.

Popovitsch discloses an apparatus for manufacturing a continuous stringer for sliding clasp fastener, comprising a forming wheel (25) having a plurality of tips (Fig. 7, 27) indenting into a plurality of corresponding recesses of the opposite forming wheel (18) in order to form a plurality of concave and convex portion on the forming coil.

It would have been obvious to one of ordinary skill in the art at the time the applicant's invention was made to modify Kato et al by providing a plurality of protrusion tips on forming member as taught by Popovitsch in order to eliminate the external pressing member.

In regard to claims 6-8, it would have been obvious to those skill in the art to modify the shape and the location of the tips in corresponding with the shape of the desired product and

relocate the tips where the deformation of the fastener coupling member is most effective. There is no invention in merely changing the shape or form of an article without changing its function except in a design patent. See *Eskimo Pie Corp. v. Levous et al.*, 3 USPQ 23 and *In re Dailey*, 357 F.2d 669, 149 USPQ 47 (CCPA 1966). It has been held that by merely shifting the position of the parts without changing the operation of the mechanism will not render the claims patentable and the placement of the mechanism is an obvious matter of design choice. *In re Japikse*, 181 F.2d 1019, 86 USPQ 70 (CCPA 1950); *In re Kuhle*, 526 F.2d 553, 188 USPQ 7 (CCPA 1975).
